

Digital archiving in Denmark – strategy and implementation

Jan Dalsten Sørensen, Rigsarkivet

Reykjavík

26-05-2016

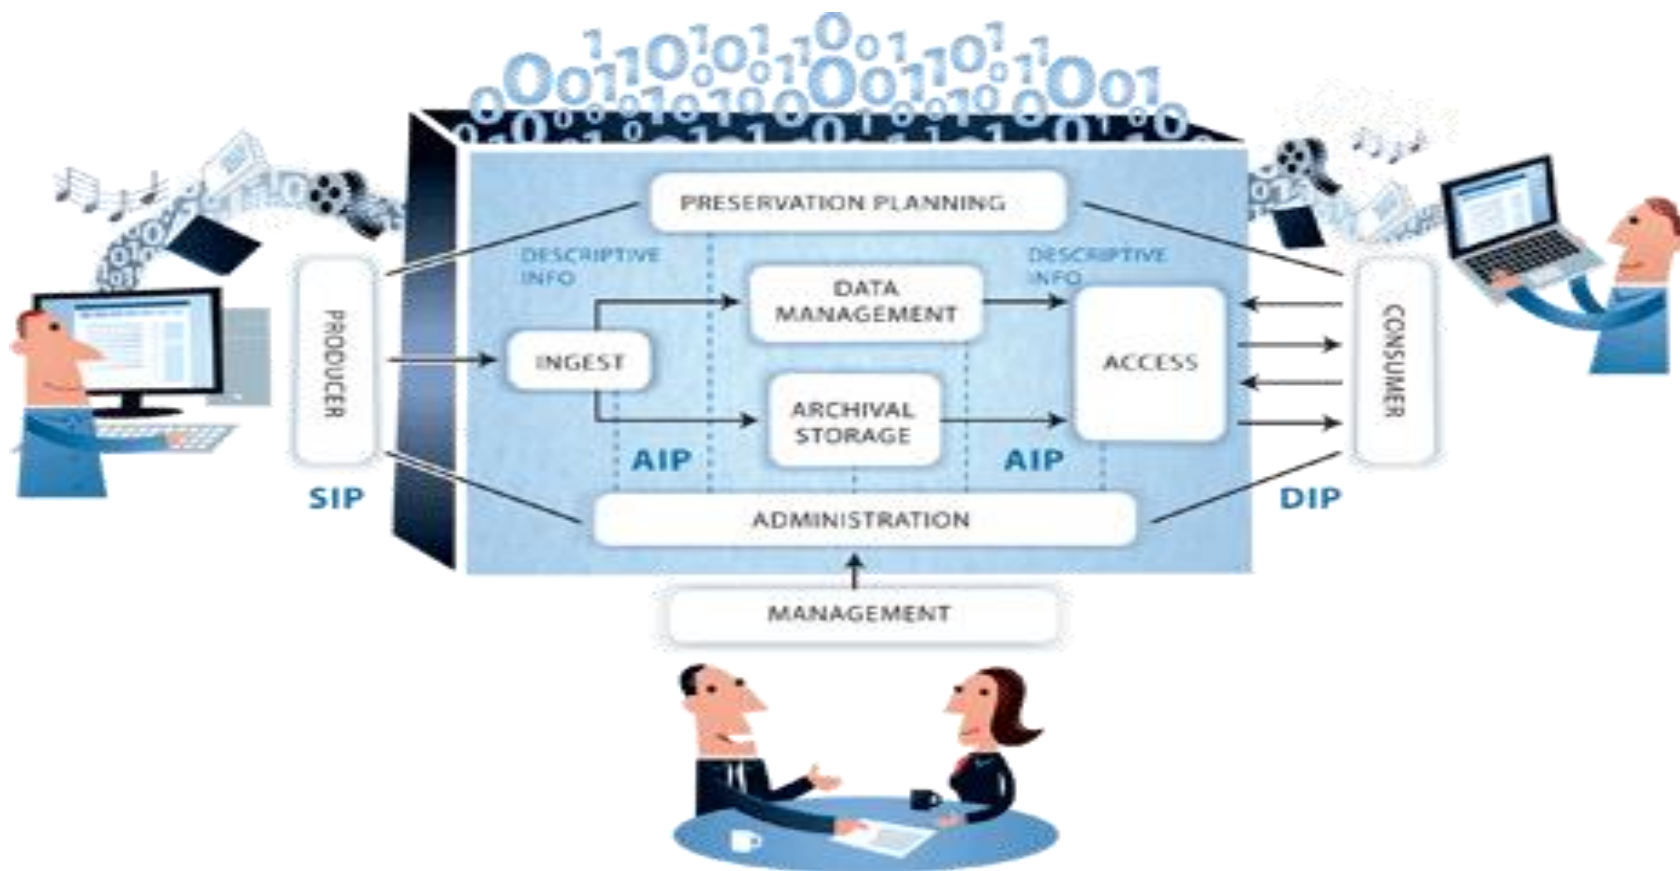

Agenda

- Why archive digitally?
- The OAIS-model
- Strategy for digital archiving in Denmark
 - Vision
 - Notification and approval
 - Frequent submissions
 - Access
 - Preservation planning
- Questions

Why archive digitally?

- The amount of information is growing rapidly – in digital form you can preserve more
- Both Iceland and Denmark are advanced countries in terms of e-Government – digital government creates digital archives!
- You may be able to print documents, but it makes no sense to print metadata, content from business systems etc.
- Retrieval, access, reuse of digitally created content must be handled digitally – otherwise you lose both authenticity and functionality.

The OAIS-model

Vision

- To ensure that digital records are preserved so as to maintain their authenticity and so that they can be found and reused

Born-digital records, challenges

- Logical preservation
- Physical preservation
- Possible strategies for logical preservation:
 - Emulation
 - Migration

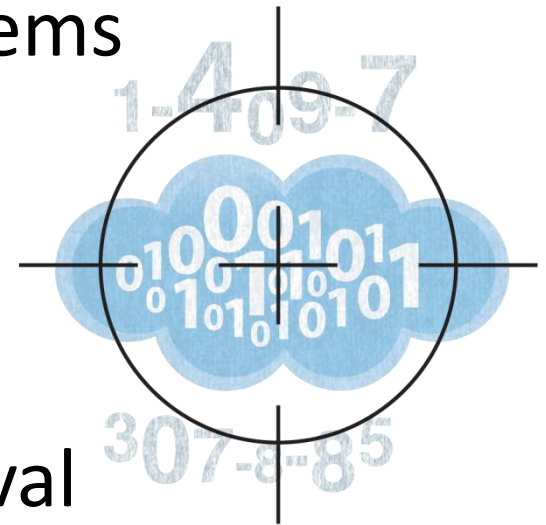

Implementation

- Early identification and approval of it-systems
- Frequent submissions in archival formats
- Preservation planning and migration as necessary

Identification & appraisal/approval

- National authorities must notify the National Archives on all it-systems
- Appraisal at an early stage
- Systems with digital content that is to be preserved must go through a process of approval

Requirements for approval

- Data structure: relational database – or the potential to create one (All)
- Limited by organisation or subject (ERMS)
- Limited “archival period” (5 years) (ERMS)
- Instructions for the use of the system, including file formats (ERMS)
- Instructions for migration to archival format (All)

Mandatory Metadata?

- Only a few, because the agencies should use the metadata they need, not the metadata the National Archives can think of
- All metadata is transferred to the National Archives as tables in a relational structure
- Certain key metadata must be registered about files and documents

Mandatory Metadata

- Files: ID, title, classification according to file plan
- Documents: ID, title, date, sender/recipient (for letters), which file it belongs to

Evolving Concept of "System"

Until recently: IT-system = a database and an application

Today: Service Oriented Architecture; loosely coupled systems etc.

→ what is the unit that can be handled by the archives in terms of appraisal, approval, transfer and dissemination?

→ Must be defined by the records creator at the time of notification – and responsibility for "archival considerations" must be in place

Set-up for Submission of Digital Records

- Submissions to the National Archives must take place as non – system dependent SIPs, at times determined by the National Archives
- ..usually every 5 years to avoid technological obsolescence. This means that current records can be submitted, while still in use by the records creator
- All submissions are tested to ensure compliance with requirements

Delimitation of SIP's from RM-systems

- 1. Archival period: All files are closed, unfinished files must be reopened in a new archival period
- 2. Snapshot: All files and documents including metadata from a fixed period (e.g. 1.1.2007-31.12.2011).
- 3. Snapshot with closed files: A variation of model 2, with only closed files, but metadata from all documents and files from a fixed period

Formats for submission/preservation

Requirements are defined in an Executive Order on Submission Information Packages:

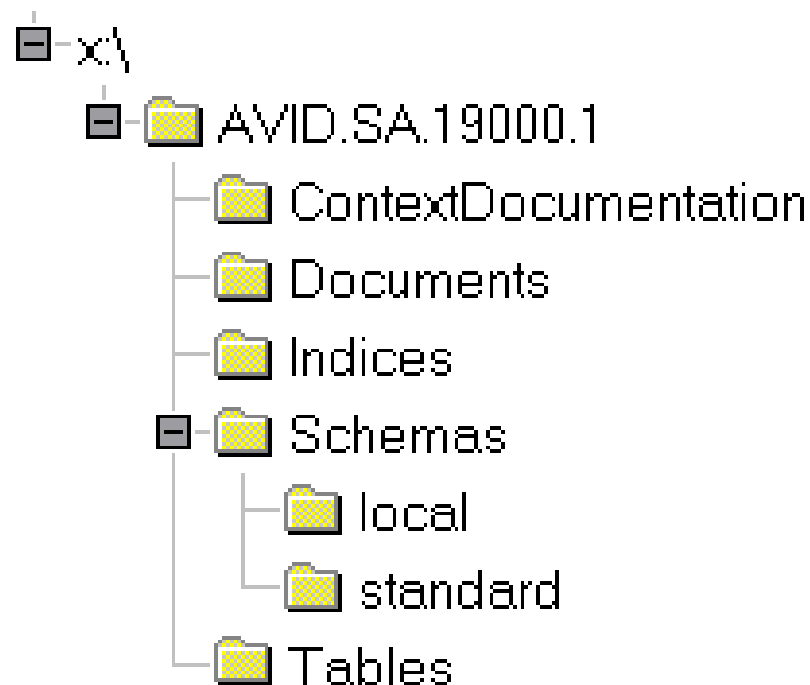

- relational databases
- XML (modified SIARD) & UTF-8
- TIFF, JPEG-2000, MP3, MPEG-2, MPEG-4, GML
- standardized documentation
- standardized structure

Standardized Mark-up of Certain Columns

- Identification of agency, if the system is used by more than one
- Document identification
- Storage form (paper, digital, irrelevant)
- Case file identification
- Case file title
- Document title
- Document date
- Sender/recipient
- Digital signature (i.e. information that has been extracted from a digital signature) [hardly ever used]
- Appraisal decisions

Structure and Content

Indices

Test

- All submissions are tested using the test tool ADA
- The automated test is combined with a manual test
- Usually submissions are sent back to the records creator for corrections 2-3 times

Physical Preservation

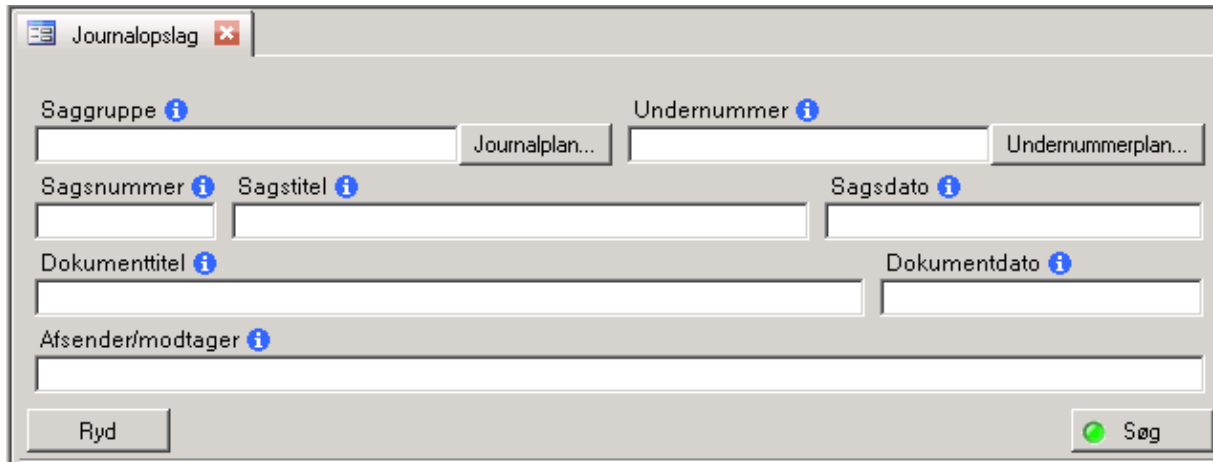

- Distributed Digital Preservation
 - Several identical independent copies
 - Both optical and magnetic media
 - Several locations
- Currently about 100 TB born-digital data (in three copies), more than 4500 individual AIP's.

Access: SOFIA

- AIPs from Electronic Records Managements Systems
 - have the same structure
 - solution: specific model for producing DIP resulting in a search form
 - usability: HIGH
- AIPs from other systems (business systems)
 - are very diverse
 - solution: general tool for making queries, general tool for making search forms
 - usability: LOW

Searching in DIPs of Records Management Systems

- Standardized interface

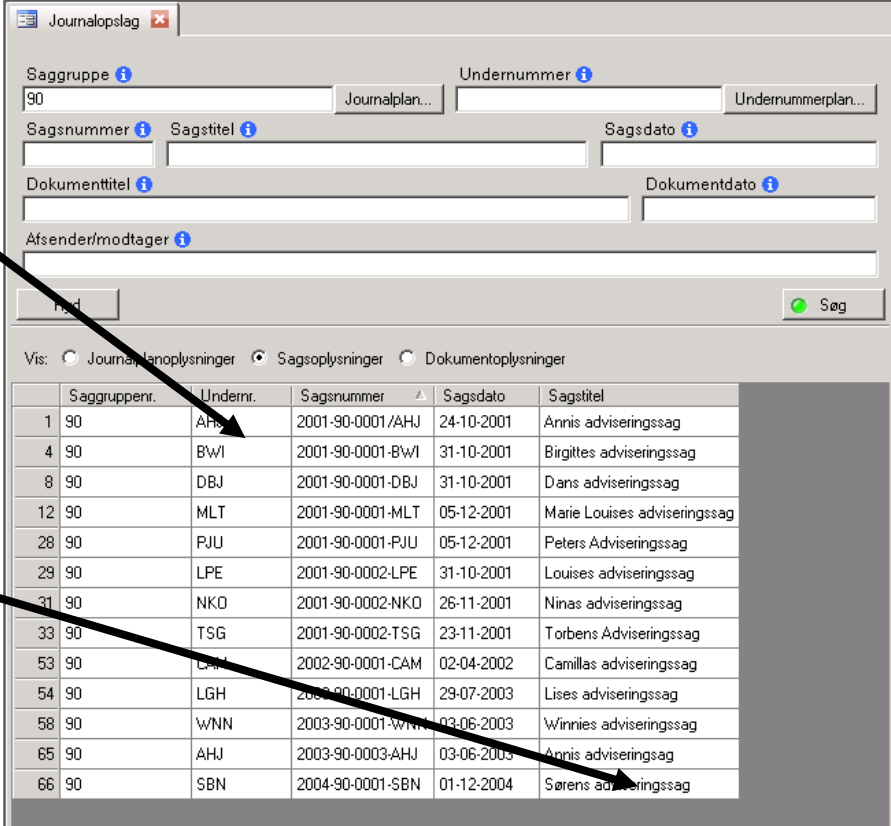

The screenshot shows a search interface for 'Journalopslag'. It features several search fields and buttons:

- Saggruppe** (with an information icon) and **Undernummer** (with an information icon) fields, each with a corresponding 'Journalplan...' and 'Undernummerplan...' button.
- Sagsnummer** (with an information icon), **Sagstitel** (with an information icon), and **Sagsdato** (with an information icon) fields.
- Dokumenttitel** (with an information icon) and **Dokumentdato** (with an information icon) fields.
- Afsender/modtager** (with an information icon) field.
- A **Ryd** (Clear) button at the bottom left.
- A **Søg** (Search) button at the bottom right, featuring a green magnifying glass icon.

Show only case file information

Double click on case file

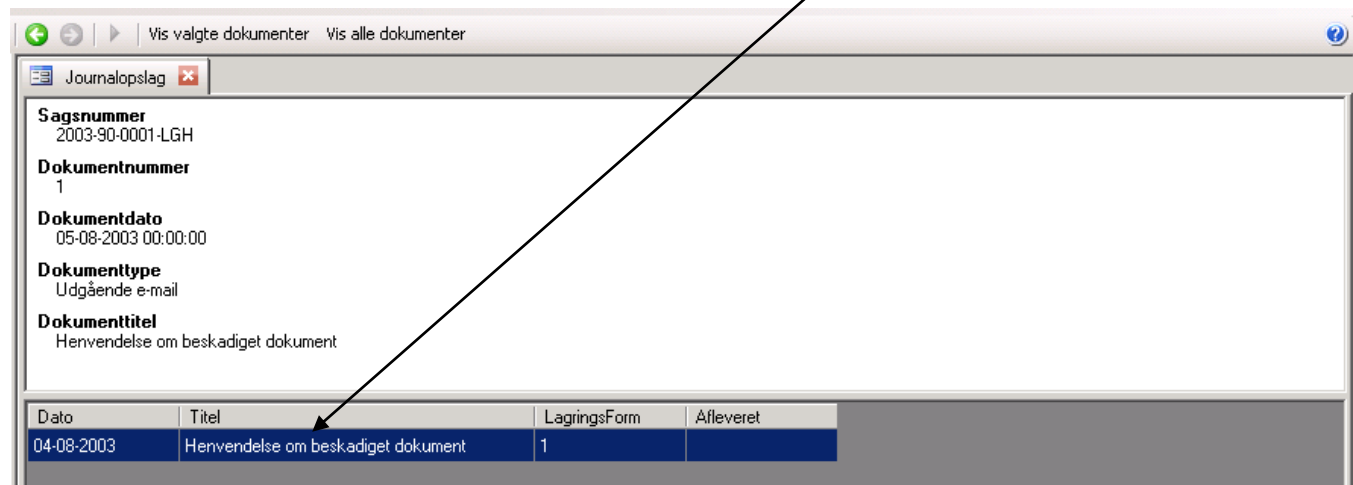

The screenshot shows the 'Journalopslag' application window. At the top, there are search filters for 'Saggruppe' (90), 'Undernummer', 'Sagsnummer', 'Sagstitel', 'Sagsdato', 'Dokumenttitel', 'Dokumentdato', and 'Afsender/modtager'. Below the filters is a 'Søg' button. Underneath, there are radio buttons for 'Journaloplysninger', 'Sagsoplysninger' (selected), and 'Dokumentoplysninger'. The main area contains a table with the following data:

	Saggruppenr.	Undernr.	Sagsnummer	Sagsdato	Sagstitel
1	90	AHJ	2001-90-0001-AHJ	24-10-2001	Annis adviserings sag
4	90	BWl	2001-90-0001-BWl	31-10-2001	Bigittes adviserings sag
8	90	DBJ	2001-90-0001-DBJ	31-10-2001	Dans adviserings sag
12	90	MLT	2001-90-0001-MLT	05-12-2001	Marie Louises adviserings sag
28	90	PJU	2001-90-0001-PJU	05-12-2001	Peters Adviserings sag
29	90	LPE	2001-90-0002-LPE	31-10-2001	Louises adviserings sag
31	90	NKO	2001-90-0002-NKO	26-11-2001	Ninas adviserings sag
33	90	TSG	2001-90-0002-TSG	23-11-2001	Torbens Adviserings sag
53	90	CAM	2002-90-0001-CAM	02-04-2002	Camillas adviserings sag
54	90	LGH	2003-90-0001-LGH	29-07-2003	Lises adviserings sag
58	90	WNN	2003-90-0001-WNN	03-06-2003	Winnies adviserings sag
65	90	AHJ	2003-90-0003-AHJ	03-06-2003	Annis adviserings sag
66	90	SBN	2004-90-0001-SBN	01-12-2004	Sørens adviserings sag

Information of the document and link to the electronic document

Double click on document

The screenshot shows a web application window with a title bar containing navigation buttons and the text "Vis valgte dokumenter" and "Vis alle dokumenter". Below the title bar is a tab labeled "Journalopslag". The main content area displays the following document information:

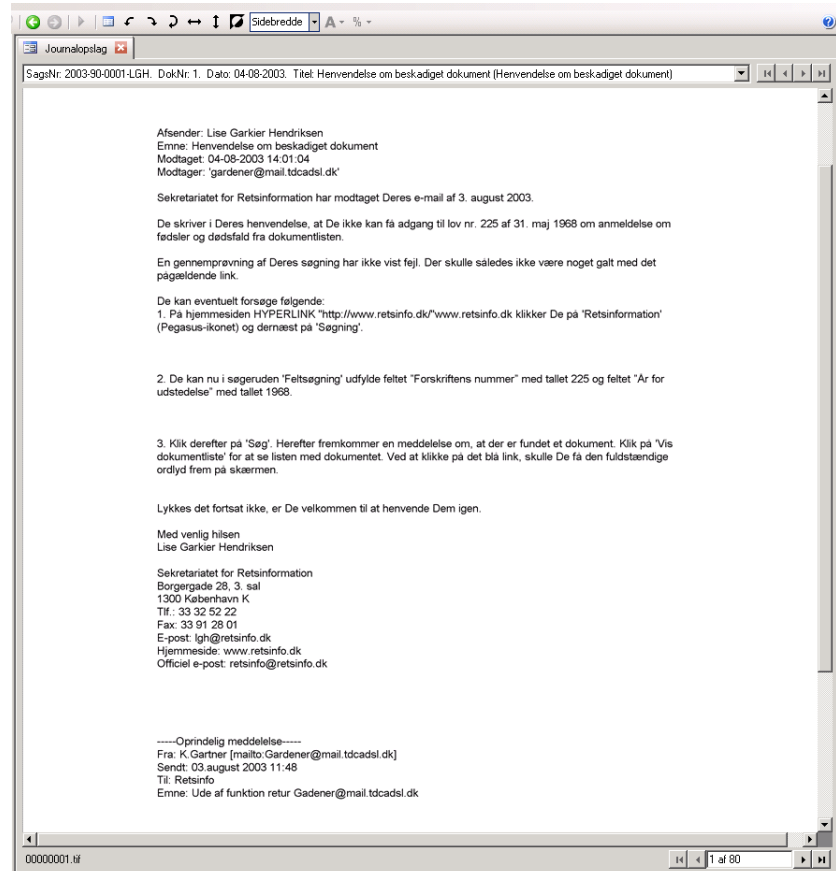

- Sagsnummer**: 2003-90-0001-LGH
- Dokumentnummer**: 1
- Dokumentdato**: 05-08-2003 00:00:00
- Dokumenttype**: Udgående e-mail
- Dokumenttitel**: Henvendelse om beskadiget dokument

At the bottom of the window is a table with the following data:

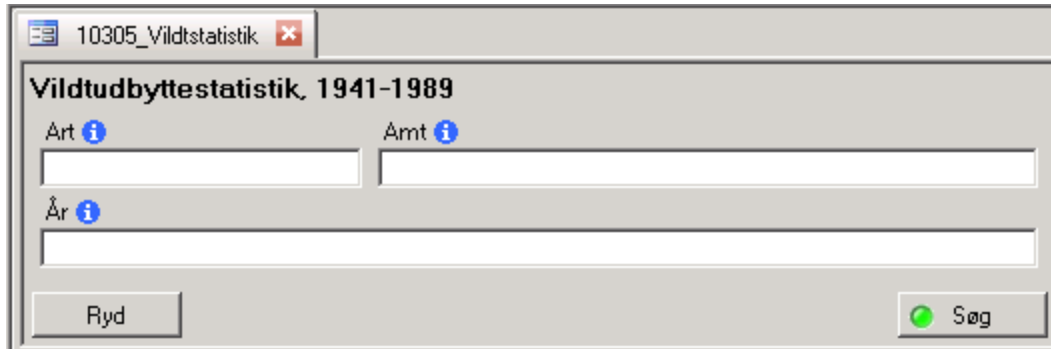

Dato	Titel	LagringsForm	Afleveret
04-08-2003	Henvendelse om beskadiget dokument	1	

An arrow points from the text "Double click on document" to the "Titel" cell of the table row.

Ryd Søg

Two options:

1. Use search form
2. Make your own query into the database

Preservation planning

- When should the preservation formats be changed?
- When should we migrate media or formats?
- What developments do we see in the use of IT among the authorities, and how may that affect us?

Risk assessment

- In digital preservation you will often find that there is no single correct answer
- Risk assessment is at the core of the development of a strategy
